Production

Our production plants are equipped with high speed twin-screw extrusion lines to provide the high quality of masterbatches. All plants have their own QC laboratories.

BARS-2 is a dynamic and rapidly developing company, which constantly increase its facility and the range of the products.

Company Profile

Scientific and production company BARS-2, BASCO® trademark, is a leader in masterbatch production for colouring and modification of polymers in Russia. The company has been successfully operating on the Russian market since 1992. Our head office is located in Saint-Petersburg and now we have three production plants in Russia.

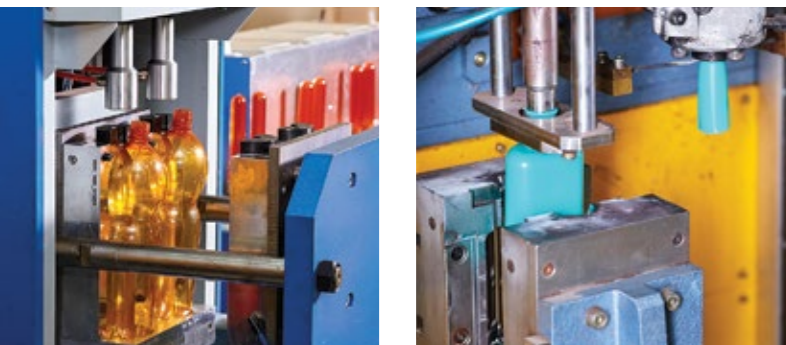

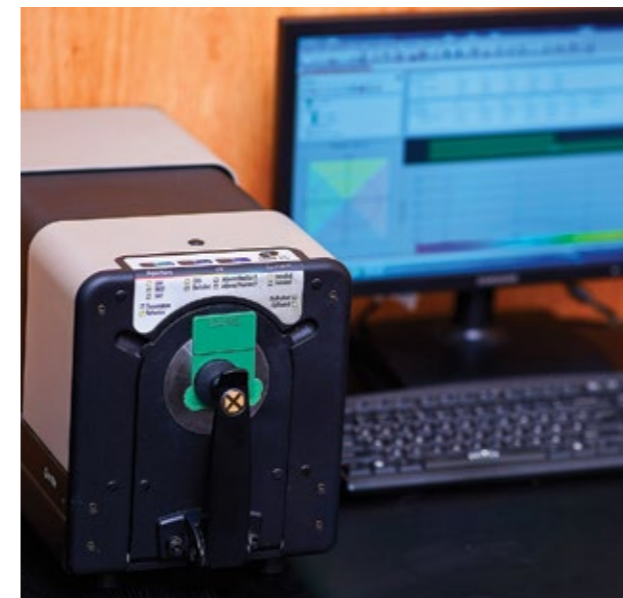

BARS-2 has representative offices with its stocks in all federal regions in Russia, as well as a wide dealer network in the Russian Federation, CIS, Baltic and European countries.

Quality

Our quality control system is based on 25 years of experience, successful integration of research and development methods and three-level quality control: incoming control of raw materials, tests during production and quality control of the finished product.

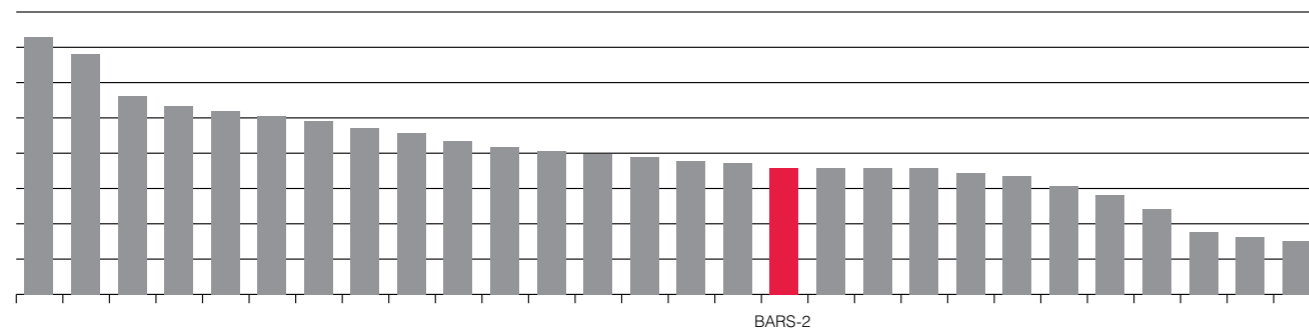

The BARS-2 Quality Management System has been operating in accordance with the requirements of ISO 9001:2015 in IQNET system since 2004 and in full compliance with REACH and European Food Approval requirements.

Research & Development

We provide our customers with the best product solutions and have a professional technical team. Our company has a modern and well-equipped Research & Development Center for modeling all main polymer processing types and creating new products to fulfill the requirements of the market and our customers.

Today BARS-2 is among the top twenty producers of masterbatches in Europe (17 place among 300 European MB producers) with an annual estimated throughput of 40,000 tons.

Products

Our production range includes BASCO® white, black and color masterbatches with different types of polymers, based on the customer's requirements.

A wide range of BASCO® additive masterbatches is produced for the modification of many properties of polymer goods, improving them and making them more attractive for the customers. Our products are applied in injection molding, blow molding, extrusion and other various types of polymer processing.
